Mark, I notice the same information in the Telluride paper and due to my concern about what you published in the Standard, I asked several people what they heard me say. They also are aware that EPA did not have fish tissue sampled, therefore, there would be no reason to have stated there are metals in the fish. None of these attendees heard me say there are metals in the fish. What they heard me say was that there are metals in the Animas. I am hoping to hear back from Tom Schillaci to see if the video will also help correct this; however, I believe that unless you have me taped saying such, you should correct this and publish the correction.

Sincerely,

Sabrina Forrest
